BEYOND MOVEMENT: THE COGNITIVE IMPACT OF PARKINSON'S

This presentation provides an overview of how Parkinson disease can affect cognitive function. It outlines common changes in areas such as attention, memory, and executive functioning, and discusses how these symptoms may progress over time. The session aims to offer a clear understanding of the cognitive challenges associated with Parkinson's and their implications for daily life and care.

ABOUT DR. CAMICOLI

Dr. Camicioli is Professor of Medicine at the University of Alberta. His research interests relate to blood, gait and neuro-imaging biomarkers associated with cognition and functional decline in aging and Parkinson disease. He is a member of the executive committee of the Canadian Consortium on Neurodegeneration in Aging (CCNA). He is a co-applicant on C-OPN (the Canadian Open Parkinson Network). He serves on the Parkinson Canada Research and Scientific Advisory Board. Current studies are examining risk factors and their modification in Parkinson disease and Mild Cognitive Impairment. He has over 250 research publications
