

SPEECH LANGUAGE PATHOLOGIST

DR. CORINNE JONES

Corinne Jones is an Associate Professor in the Department of Communication Sciences and Disorders at the University of Iowa, supporting the SLP clinical degree program. She is a clinician-scientist whose work bridges swallowing physiology, neurodegenerative disease, and translational clinical research. Dr. Jones joins Iowa from the University of Texas at Austin, where she held joint faculty appointments in Speech, Language, and Hearing Sciences and Neurology and maintained an active clinical practice as a speech-language pathologist at UT Health Austin. Her work focuses on understanding how swallowing is controlled, how it breaks down in aging and neurological disease, and how physiology-driven approaches can improve the assessment and treatment of dysphagia.

Corinne Jones' research program is centered on advancing physiology-based understanding and clinical management of swallowing disorders. A central theme of her research is understanding how swallowing is controlled and how it breaks down in conditions such as Parkinson's disease and other neurologic disorders, with the goal of improving how we assess and treat dysphagia.
